

Digital Skills Animation

Digital literacy and digital skills are a vital and ever growing part of modern life. CCEA is currently developing a new pathway that will show a clear progression of these digital skills for learners' from Foundation Stage to A Level and beyond. To support this we are creating programme of engagement with teachers on digital skills, computing and coding within the curriculum. By engaging with teachers in this new development we aim to ensure that the digital users and makers of the future can explore their strengths and capitalise on their unique potential to contribute to our society, economy and the environment. If you're from education or industry with an interest in this area and would like to contribute to the discussion, please get in touch with us.
