*assessing*

Aspects of Physical Chemistry in  
Industrial Processes

[SZ031]

\*SZ031\*

MONDAY 3 JUNE, AFTERNOON

### TIME

1 hour 30 minutes.

### INSTRUCTIONS TO CANDIDATES

Write your Centre Number and Candidate Number in the spaces provided at the top of this page.

**You must answer the questions in the spaces provided.**

**Do not write outside the boxed area on each page or on blank pages.**

Complete in black ink only. **Do not write with a gel pen.**

Answer **all six** questions.

### INFORMATION FOR CANDIDATES

The total mark for this paper is 75.

Figures in brackets printed down the right-hand side of pages indicate the marks awarded to each question or part question.

A Periodic Table of Elements is included in this question paper.

You may use an electronic calculator.

Quality of written communication will be assessed in Question 3.

1 Nitrous oxide (N<sub>2</sub>O) has traditionally been used as an anaesthetic.

It is produced by the thermal decomposition of ammonium nitrate in a continuous process.

(a) (i) Define **continuous process**.

\_\_\_\_\_  
\_\_\_\_\_ [2]

(ii) State **one** way in which a continuous process reduces costs compared to a batch process.

\_\_\_\_\_  
\_\_\_\_\_ [1]

(b) Calculate the relative formula mass of:

(i) NH<sub>4</sub>NO<sub>3</sub>

\_\_\_\_\_ [1]

(ii) N<sub>2</sub>O

\_\_\_\_\_ [1]

(iii) Calculate the mass, in kilograms, of ammonium nitrate needed to make 143 kg of nitrous oxide.

**Show your working.**

\_\_\_\_\_ kg [2]

(iv) Calculate the percentage yield of nitrous oxide achieved if only 109 kg of it is formed instead of the expected 143 kg.

**Give your answer to one decimal place.**

\_\_\_\_\_ % [1]

(v) Suggest **one** reason why the yield is not 100%.

\_\_\_\_\_  
\_\_\_\_\_ [1]

(c) A new chemical manufacturing plant is to be built to produce large volumes of nitrous oxide.

Suggest **one** way that the building of this new plant could benefit the community.

\_\_\_\_\_  
\_\_\_\_\_ [1]

**[Turn over**

2 Chemical reactions can be exothermic or endothermic.

(a) (i) Using the axes below, construct a reaction profile diagram for an endothermic reaction.

You must label:

- both axes
- reactants and products
- activation energy ( $E_A$ )

[4]

(ii) Explain how the reaction profile diagram you have drawn shows that the reaction is endothermic.

---

---

[1]

(iii) Define **activation energy**.

---

---

[2]

(b) The curve below shows the distribution of energies that gaseous molecules possess during a reaction.

**M** is the number of molecules with the most common energy and **E<sub>A</sub>** is the activation energy.

Source: Principal Examiner

(i) What is the name given to this type of curve?

[1]

(ii) The temperature of the gas is increased.

What is the effect on  $E_A$  and  $M$ ?

Tick (✓) the correct box.

$E_A$	$M$	effect
decrease	increase	
decrease	decrease	
constant	increase	
constant	decrease	

[1]

(iii) On the curve above, shade the area that represents the number of molecules that can successfully react.

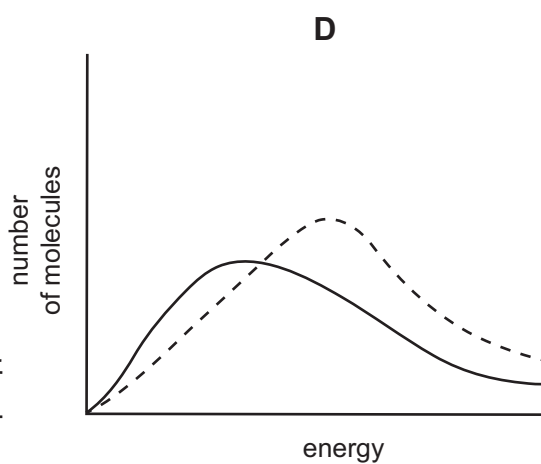

[1]

[Turn over

(iv) The diagrams below labelled **A**, **B**, **C** and **D** show a dashed curve for the distribution of energies that gaseous molecules possess at **400 K** for four different reactions.

Which of the diagrams (**A**, **B**, **C** or **D**) correctly shows a **solid** curve which represents the distribution of energies that gaseous molecules possess at **250 K** for that reaction?

Source: Principal Examiner

diagram \_\_\_\_\_ [1]

**3** A chemist decides to carry out an experiment to determine the rate of a reaction between calcium carbonate pieces and excess nitric acid.

During this reaction a gas is produced and collected.

Describe how you would use a gas syringe to follow this reaction.

Explain how the results collected could be used to determine the rate of the reaction.

**Quality of written communication will be assessed in this question.**

- 4 Sulfuric acid is manufactured in the Contact process.  
The second stage in this process involves passing sulfur dioxide and oxygen over a heated catalyst to produce sulfur trioxide.

- (a) (i) Define the term **catalyst**.

\_\_\_\_\_  
\_\_\_\_\_ [2]

- (ii) Name the catalyst used in the Contact process.

\_\_\_\_\_ [1]

- (iii) State **one** direct cost involved in this process.

\_\_\_\_\_ [1]

- (b) The yield of sulfur trioxide obtained in this dynamic equilibrium can be improved by changing some of the conditions.

- (i) Define **dynamic equilibrium**.

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_ [2]

- (ii) Using your knowledge of equilibrium, state and explain what would happen to the yield of sulfur trioxide obtained in this reaction if the temperature is increased **or** the pressure is increased.  
All other conditions remain the same.

### Increasing the temperature

Effect on yield

---

Explanation

---

---

---

### Increasing the pressure

Effect on yield

---

Explanation

---

---

---

[4]

- (iii) State one **disadvantage** of using high pressures in industry.

---

[1]

- (c) Sulfur trioxide reacts with water to produce sulfuric acid.

Write a balanced symbol equation for this reaction.

---

[2]

[Turn over

- 5 The enthalpy of combustion of a liquid fuel can be determined experimentally by burning the fuel in a spirit burner.

The energy released is used to raise the temperature of a known mass of water.

- (a) State **all** the equipment needed to determine the enthalpy of combustion of ethanol.

---

---

---

[3]

- (b) The results obtained from this experiment are shown below.

Mass of water	150.00 g
Mass of spirit burner and ethanol at start	62.09 g
Mass of spirit burner and ethanol at end	60.94 g
Temperature of water at start	22°C
Temperature of water at end	43°C

- (i) Calculate the temperature change of the water in this experiment.

\_\_\_\_\_ °C [1]

- (ii) Write the equation used to calculate the energy transferred to the water in this experiment.

\_\_\_\_\_ [1]

- (iii) Calculate the energy transferred to the water in this experiment.  
The specific heat capacity of water is  $4.2 \text{ Jg}^{-1}\text{C}^{-1}$ .

**Show your working.**

**Include units in your answer.**

\_\_\_\_\_ [3]  
unit = \_\_\_\_\_

- (iv) Calculate the number of moles of ethanol burned in this experiment.  
The relative formula mass of ethanol is 46.

**Show your working.**

\_\_\_\_\_ moles [2]

[Turn over

- (v) Use the answers to parts (iii) and (iv) to calculate the experimentally determined value for the enthalpy of combustion of one mole of ethanol.

**Show your working.**

**Include units in your answer.**

\_\_\_\_\_ [3]  
unit = \_\_\_\_\_

- (vi) State **one** source of error when experimentally determining the enthalpy of combustion of ethanol and explain how this source of error could be reduced.

Source of error

\_\_\_\_\_

How error could be reduced

\_\_\_\_\_

\_\_\_\_\_ [2]

(c) (i) Calculate the theoretical enthalpy of combustion for ethanol using a Hess Cycle.

The equation for the reaction and enthalpy of formation data is given below.

Show your working.

	$\text{C}_2\text{H}_5\text{OH}$	$\text{O}_2$	$\text{CO}_2$	$\text{H}_2\text{O}$
Enthalpy of formation /kJ mol <sup>-1</sup>	-278	0	-394	-286

\_\_\_\_\_ kJ mol<sup>-1</sup> [3]

(ii) Suggest why the enthalpy of formation of oxygen is zero.

\_\_\_\_\_  
\_\_\_\_\_ [1]

[Turn over

6 A lab technician carried out a titration to determine the molarity of a solution of ethanoic acid ( $\text{CH}_3\text{COOH}$ ) using a standard solution of sodium hydroxide ( $\text{NaOH}$ ).

(a) Calculate the concentration of the standard solution formed when 24.0 g of sodium hydroxide is dissolved in  $500\text{ cm}^3$  of water.

**Show your working.**

\_\_\_\_\_  $\text{mol dm}^{-3}$  [3]

(b) Describe how the technician accurately prepared  $500\text{ cm}^3$  of the standard sodium hydroxide solution.

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

[6]

(c) Draw and label a diagram of the assembled apparatus used to titrate 25.0 cm<sup>3</sup> of ethanoic acid solution with the standard solution of sodium hydroxide.

Clearly indicate the location of each solution in your diagram.

[3]

(d) Suggest which **one** of the following curves, **A**, **B** or **C**, best represents the titration between ethanoic acid and sodium hydroxide.

**A**

**B**

**C**

Source: Principal Examiner

curve \_\_\_\_\_ [1]

[Turn over

- (e) State a suitable indicator for the titration between ethanoic acid and sodium hydroxide, and state the colour change at the end point.

Indicator \_\_\_\_\_

Colour change

from \_\_\_\_\_ to \_\_\_\_\_ [3]
