

Solution

Pupils can use diagrams to visualise the plan of the room and the walls.

Area of side walls:  $4 \times 2.4 \times 2 = 19.2 \text{ m}^2$   
 Area of front and back walls:  $4.5 \times 2.4 \times 2 = 21.6 \text{ m}^2$   
 Total area of walls:  $40.8 \text{ m}^2$

Subtract the area of:

- doorway converted from mm to metres:  $0.9 \text{ m} \times 2.1 \text{ m} = 1.89 \text{ m}^2$
- chimney breast:  $1.2 \text{ m} \times 2.4 \text{ m} = 2.88 \text{ m}^2$
- windows converted from mm to metres:  $0.9 \text{ m} \times 1.45 \text{ m} \times 2 = 2.61 \text{ m}^2$ .

The total area to be subtracted is  $7.38 \text{ m}^2$

The total area of walls to be painted:  $40.8 \text{ m}^2 - 7.38 \text{ m}^2 = 33.42 \text{ m}^2$   
 Two coats:  $33.42 \text{ m}^2 \times 2 = 66.84 \text{ m}^2$

One litre of paint covers  $10 \text{ m}^2$  so 6.684 litres are needed.

The cheapest is one 5 litre tin and one 2.5 litre tin, at a cost of  $\text{£}36.99 + \text{£}19.99 = \text{£}56.98$

The area of ceiling to be painted = Total area of ceiling subtract area at top of the chimney breast =  $(4.5 \text{ m} \times 4 \text{ m}) - (1.2 \text{ m} \times 0.6 \text{ m}) = 18 \text{ m}^2 - 0.72 \text{ m}^2 = 17.28 \text{ m}^2$   
 Two coats:  $17.28 \text{ m}^2 \times 2 = 34.56 \text{ m}^2$

One litre of paint covers  $10 \text{ m}^2$  so 3.456 litres are needed.

The cheapest is one 2.5 litre tin and a one litre tin at a cost of  $\text{£}12.99 + \text{£}5.99 = \text{£}18.98$

Labour:  $\text{£}90 \times 1.5 = \text{£}135$

Total cost:  $\text{£}56.98 + \text{£}18.98 + \text{£}135 = \text{£}210.96$

The cheapest quote that Edel could give for the cost of the contract is **£210.96**.
